

# Rock Formation Quiz

Now that you have completed the sections about the different types of rocks, you are ready to take a quiz. This quiz consists of a series of photographs. You will need to determine if the rock formations in each photograph is the result of igneous, sedimentary, or metamorphic rock. A **Formation** is a group of rocks that are related by the way they were formed and the time in history in which they were formed. If you stop in the middle of the quiz, you can jump from this page to the rock formation you are on. Each page links to the next page of the quiz. Good luck!
